PagerDuty Process Automation
Automation Catalog Setup

Introduction

This document describes the process of setting up an Automation Job Catalog.

The Job Catalog is intended as a quick start to creating your own jobs, as well as a lean by example approach to the basics of Process Automation on prem or Runbook Automation (Saas)

The Job Catalog is maintained by the Automation team, and supplied as-is, with no implied support.

Functionality is evolving, but at present it includes the following

- First steps (10 Jobs to describe basic Automation Functionality)
- CD/CI (Triggering Pipelines from multiple CD/CI tools).

SETUP

Create a Project specifically for this purpose. The name is unimportant, but suggested names help teams identify the shared environment could be:

Catalog, Template, Learning,Blueprints

CONFIGURATION

Setup a connection to the Github repository via SCM Import (https://github.com/emea-automation/enterprise-catalog.git)

Add the following fields:

Git URL: https://github.com/emea-automation/enterprise-catalog.git

Regular Expression : .*/.yaml (from The Dropdown
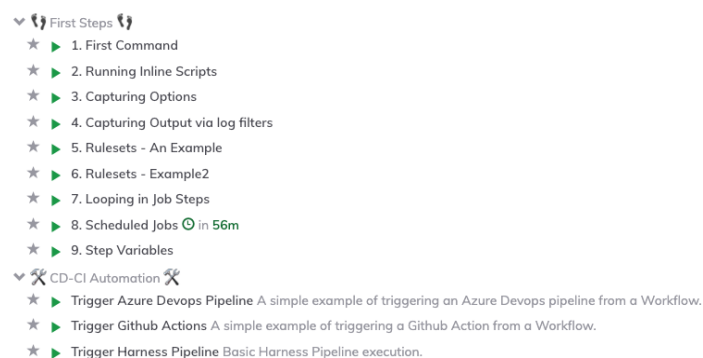

Job Source files Format: yaml

Returning to All jobs should show !Import Needed

Click Job Actions >Import remote changes >Import (Ensuring all jobs are selected)

Jobs should now be imported as below :-

Remember to check frequently, as these jobs will be added to frequently.
